

## GLITE COMPUTING ELEMENT

### 1. RELEASE DESCRIPTION

This release contains the gLite Computing Element module v. 1.2.3. The following sections provide additional information about the release content, the module dependencies, the known bugs and issues and a list of bugs closed since the previous release. For information about installing and using the gLite Computing Element, please refer to the gLite Installation and User Guides.

### 2. CHANGES IN THIS RELEASE

This release includes the following changes:

- Added auto-creation of `mkgridmap.conf` if `install.mkgridmap.cron` param is true (by default the CE doesn't use user DN mappings, but only VO membership information, so normally this functionality is disabled)
- Added stop of Condor services. Condor services are started by the gatekeeper when needed. However, there was no way of stopping them using the standard module stop commands
  - `glite-ce-config.py --stop`
  - `/etc/init.d/gLite stop`
- Moved GRAM job state directory to `$GLITE_LOCATION_VAR/gram_job_state` (it was `$GLITE_LOCATION_TPM/gram_job_state` and this may be deleted by `tmpwatch`)
- Updated `GlueHostApplicationSoftwareRunTimeEnvironment` to `GLITE_1_1` in the CE information published to WMS and R-GMA
- All parameters in the service instances to be published to R-GMA in the configuration file now have default values. There is no need to modify anything, unless a different naming convention for services or different publishing rates need to be set
- Bug fixes

## 5. KNOWN BUGS AND ISSUES

This release has the following bugs and issues. Bug numbers refer to the gLite Bug Tracking system database hosted on the CERN Savannah system at <https://savannah.cern.ch/bugs/?group=jralmdw>.

- During the execution of the CE configuration script, a number of Globus configuration scripts are executed. One of these scripts outputs the following error (BUG #5992):

[...]

```
running /opt/globus/setup/globus/setup-globus-gram-reporter-fork..[ Changing to
/opt/globus/setup/globus ]
Setting up fork gram reporter in MDS
-----
Error fork GRAM reporter entry jobmanager-fork. Aborting!
ERROR: Command failed
```

[...]

This error doesn't affect the correct functionality of the CE and can be ignored.

- The CE Monitor doesn't correctly publish Condor queues. This will be fixed in a future release
- This release include a tech preview of the GT4 Workspace Service that can be used as an alternative to the pool accounts method for creating and configuring the user execution space. This preview can be activated by using the alternative configuration script `glite-ce-wss-config.py`. This script requires Apache Ant v. 1.6.1 or greater to be installed and properly configured on the server. Please refer to the Apache Ant user manual for the details
- No removal procedure is provided with this release apart from the removal of the RPMS. Any account, group or other resource created during the module configuration must be manually cleaned up.

Known open bugs and requests:

Bug number	Description	
#6372	misleading output message from the gpt-postinstall script	
#6442	ability to configure different user and group IDs	
#7303	glite CE configuration module should download voms cert	
#7356	glite-ce-config.py --status fails when the configuration is in the central xml file	
#7580	lots of pbs_status.sh processes in the CE when a job is submitted	
#7597	./glite-ce-info for condor fails to publish condor queues	
#7718	VO specific access control to queues doesn't work	
#7808	Jobs submitted to WMS get aborted	
#7930	globus lib missing when running blah job submit	

Fixed in this or previous releases, but not yet tested:

Bug number	Description	
#5707	condor installation gives an error	
#5992	glite CE post installation script gives an expected error	
#6083	CE ISM Purchaser uses undefined m4 macros	
#6412	--start and --stop options not documented in glite-ce-config.py, glite-lb-config.py	
#6439	Limit of 2048 chars per line in scripts submitted to pbs	
#6665	Only 1 GlueCESEBind objectclass provided by CEMon	
#6760	predifinedSubscriptionList.xml --> predefinedSubscriptionList.xml	
#6763	VOMS server certificate not installed by CE installer	
#7050	The ce deployment module stop method does not check if servicetool stops correctly	
#7056	The default template for the CE has ambiguous parameter substitutions	
#7407	The Servicetool service doesn't publish the CE Monitor service	
#7736	glite-ce-site config misses parameters	
#7846	Globus job state file dir in /tmp	
#8414	CE doc

## 7. PREVIOUS RELEASES

### 7.1. RELEASE 1.2.1

#### 7.1.1. Release Description

This release contains the gLite Computing Element module v. 1.2.1. The following sections provide additional information about the release content, the module dependencies, the know bugs and issues and a list of bugs closed since the previous release. For information about installing and using the gLite Computing Element, please refer to the gLite Installation and User Guides.

#### 7.1.2. Changes in this Release

This release includes the following changes:

- Added an GSI-free version of LCMAPS to be used with the GT4 Workspace Service
- Added tech preview of GT4 Workspace Service
- Bug fixes

#### 7.1.3. Release contents

The gLite Computing Element v. 1.2.1 is composed of the following gLite components:

## 7.1.5. Known bugs and issues

This release has the following bugs and issues. Bug numbers refer to the gLite Bug Tracking system database hosted on the CERN Savannah system at <https://savannah.cern.ch/bugs/?group=jra1mdw>.

- No removal procedure is provided with this release apart from the removal of the RPMS. Any account, group or other resource created during the module configuration must be manually cleaned up.
- During the execution of the CE configuration script, a number of Globus configuration scripts are executed. One of these scripts outputs the following error (BUG #5992):

[...]

```
running /opt/globus/setup/globus/setup-globus-gram-reporter-fork..[ Changing to
/opt/globus/setup/globus ]
Setting up fork gram reporter in MDS
-----
Error fork GRAM reporter entry jobmanager-fork. Aborting!
ERROR: Command failed
```

[...]

This error doesn't affect the correct functionality of the CE and can be ignored.

- This release include a tech preview of the GT4 Workspace Service that can be used as an alternative to the pool accounts method for creating and configuring the user execution space. This preview can be activated by using the alternative configuration script `glite-ce-wss-config.py`. This script requires Apache Ant v. 1.6.1 or greater to be installed and properly configured on the server. Please refer to the Apache Ant user manual for the details

## 7.2. RELEASE 1.1.0

### 7.2.1. Release Description

This release contains the gLite Computing Element module v. 1.1.0. The following sections provide additional information about the release content, the module dependencies, the known bugs and issues and a list of bugs closed since the previous release. For information about installing and using the gLite Computing Element, please refer to the gLite Installation and User Guides.

### 7.2.2. Changes in this Release

This release includes the following changes:

- Added installation of R-GMA Service Publisher (glite-rgma-servicetool) to the CE module. CE services are automatically published to the configured R-GMA server
- Bug fixes

### 7.2.3. Release contents

The gLite Computing Element v. 1.1.0 is composed of the following gLite components:

Component name	Version	File

## 7.2.5. Known bugs and issues

This release has the following bugs and issues. Bug numbers refer to the gLite Bug Tracking system database hosted on the CERN Savannah system at <https://savannah.cern.ch/bugs/?group=jra1mdw>.

- No removal procedure is provided with this release apart from the removal of the RPMS. Any account, group or other resource created during the module configuration must be manually cleaned.
- During the execution of the CE configuration script, a number of Globus configuration scripts are executed. One of these scripts outputs the following error (BUG #5992):

[...]

```
running /opt/globus/setup/globus/setup-globus-gram-reporter-fork..[ Changing to
/opt/globus/setup/globus ]
```

```
Setting up fork gram reporter in MDS
```

```
-----
```

```
Error fork GRAM reporter entry jobmanager-fork. Aborting!
```

```
ERROR: Command failed
```

[...]

This error doesn't affect the correct functionality of the CE and can be ignored.

#### Known open bugs:

Bug number	Description	
#5707	condor installation gives an error	
#6158	change the final output text from the installer scripts
