

## GLITE USER INTERFACE

### 1. RELEASE DESCRIPTION

This release contains the gLite User Interface module v. 1.0.1. The following sections provide additional information about the release content, the module dependencies, the known bugs and issues and a list of bugs closed since the previous release. The gLite User Interface is a suite of several gLite clients and APIs. Please refer to the individual gLite clients release notes for additional information. For information about installing and using the gLite User Interface, please refer to the gLite Installation and User Guides.

### 2. CHANGES IN THIS RELEASE

This release introduces the following changes:

- The check for host certificates has been completely removed (it was present, but set to false)
- If external libraries like Globus and GPT are already installed as root, the existing environment variables are now correctly taken during the standard-user configuration process
- Various improvements to the configuration scripts output messages have been added
- Bug fixes in the installation and configuration scripts and in the individual gLite client and APIs components (see below for the complete list)

## 5. KNOWN BUGS AND ISSUES

This release has no known bugs and issues. Additional information can be found on the individual release notes of the Worker Node services and clients. Bug numbers refer to the gLite Bug Tracking system database hosted on the CERN Savannah system at <https://savannah.cern.ch/bugs/?group=jra1mdw>.

- No removal procedure is provided with this release apart from the removal of the RPMS. Any account, group or other resource created during the module configuration must be manually cleaned. In addition, if several gLite modules are installed on the same node, the removal procedure may fail if there are overlapping dependencies. This will be fixed in a future release. As a workaround all gLite RPMS can be removed with the following command:

```
rpm -e `rpm -qa | grep glite-`
```

- The UI module has complex external dependencies. Using the installer script is recommended only on clean machines with standard configuration. If alternative versions of the external dependencies have to be used, please customize the installer scripts as necessary or use a more sophisticated RPM management system. For non root installation, the installer script is for the time being the only supported method

Known open bugs:

Bug number	Description
#4830	Developers' guide lacks info on how to write components
#6943	If the user issuing voms-proxy-init is not a member of the specified VO, confusing error is returned.
#7219	Selects on different UIs give different results
#7316	UI installation: RPM dependency problems with SLC3

#8091	Documentation error in the installation guide for the UI module
#8091	Documentation error in the installation guide for the UI module
#8470	cannot submit job.....Error: UI_CONFIG_ATTRIBUTE
#8480	glite-ui_installer.sh crashes for a syntax error
#8499	WMS UI links different flavors of the same Globus libs

Bugs fixed in this or previous releases, but not yet tested:

Bug number	Description
#4893	WMS UI crashes with edg-job-status -all

#5089	Use of LCG-2 UI with glite does not work with pbs/blah CE	
#6085	data.ui fails looking for Globus when building cctools

#8029	error in glite-UI install documentation available.
#8037	Where do I get information to connect my UI to prototype Testbed

## 7. PREVIOUS RELEASES

### 7.1. RELEASE 1.0.0

#### 7.1.1. Release Description

This release contains the gLite User Interface module v. 1.0.0. The following sections provide additional information about the release content, the module dependencies, the known bugs and issues and a list of bugs closed since the previous release. The gLite User Interface is a suite of several gLite clients and APIs. Please refer to the individual gLite clients release notes for additional information. For information about installing and using the gLite User Interface, please refer to the gLite Installation and User Guides.

#### 7.1.2. Changes in this Release

This release introduces the following changes:

- After the UI has been installed as root or as a non-privileged user, other users can run the configuration script from their account and set up their local environment to use the same UI installation. This allows installing the UI from a central account and share the installation among multiple users. For more information refer the gLite UI Installation Guide
- The UI installation script takes a basedir parameter to specify the directory where the UI should be installed (the default is the current directory). This allows installing multiple versions of the gLite UI in separate directories. For more information refer the gLite UI Installation Guide
- Several bug fixes in the installation and configuration scripts and in the individual gLite client and APIs components (see below for the complete list)

#### 7.1.3. Release contents

The gLite User Interface v. 1.0.0 is composed of the following gLite components:

## 7.1.5. Known bugs and issues

This release has no known bugs and issues. Additional information can be found on the individual release notes of the Worker Node services and clients. Bug numbers refer to the gLite Bug Tracking system database hosted on the CERN Savannah system at <https://savannah.cern.ch/bugs/?group=jralmdw>.

- No removal procedure is provided with this release apart from the removal of the RPMS. Any account, group or other resource created during the module configuration must be manually cleaned. In addition, if several gLite modules are installed on the same node, the removal procedure may fail if there are overlapping dependencies. This will be fixed in a future release. As a workaround all gLite RPMS can be removed with the following command:

```
rpm -e `rpm -qa | grep glite`
```

- The UI module has complex external dependencies. Using the installer script is recommended only on clean machines with standard configuration. If alternative versions of the external dependencies have to be used, please customize the installer scripts as necessary or use a more sophisticated RPM management system. For non root installation, the installer script is for the time being the only supported method

Known open bugs:
