For information about installing and using the gLite Worker Node, please refer to the gLite Installation and User Guides.

### 2. CHANGES IN THIS RELEASE

This release introduces the following changes:

- The VOMS APIs and clients have been added to the WN, they were missing in the previous release

## 5. KNOWN BUGS AND ISSUES

This release has no known bugs and issues. Additional information can be found on the individual release notes of the Worker Node services and clients (I/O Client, R-GMA Client and User Interface APIs and Clients). Bug numbers refer to the gLite Bug Tracking system database hosted on the CERN Savannah system at <https://savannah.cern.ch/bugs/?group=jra1mdw>.

- No removal procedure is provided with this release apart from the removal of the RPMS. Any account, group or other resource created during the module configuration must be manually cleaned. In addition, if several gLite modules are installed on the same node, the removal procedure may fail if there overlapping dependencies. This will be fixed in a future release. As a workaround all gLite RPMS can be removed with the following command:

```
rpm -e `rpm -qa | grep glite`
```

## 7. PREVIOUS RELEASES

### 7.1. RELEASE 1.1.1

#### 7.1.1. Release Description

This release contains the gLite Worker Node module v. 1.1.1. The following sections provide additional information about the release content, the module dependencies, the known bugs and issues and a list of bugs closed since the previous release. The gLite Standard Worker Node is a suite of several gLite clients. Please refer to the individual gLite clients release notes for additional information. For information about installing and using the gLite Worker Node, please refer to the gLite Installation and User Guides.

#### 7.1.2. Changes in this Release

This release introduces the following changes:

- The Worker Node module and all included modules (I/O Client and R-GMA Client) can now be installed as no privileged user. The installation is RPM-based and requires the use of the provided installation scripts
- The WN now includes the data management catalog APIs and clients
- Bug fixes (see below for the complete list)

### 7.1.5. Known bugs and issues

This release has no known bugs and issues. Additional information can be found on the individual release notes of the Worker Node services and clients (I/O Client, R-GMA Client and User Interface APIs and Clients). Bug numbers refer to the gLite Bug Tracking system database hosted on the CERN Savannah system at <https://savannah.cern.ch/bugs/?group=jra1mdw>.

- No removal procedure is provided with this release apart from the removal of the RPMS. Any account, group or other resource created during the module configuration must be manually cleaned. In addition, if several gLite modules are installed on the same node, the removal procedure may fail if there overlapping dependencies. This will be fixed in a future release. As a workaround all gLite RPMS can be removed with the following command:

```
rpm -e `rpm -qa | grep glite-`
```

Known open bugs:
