

GLITE DATA MANAGEMENT SINGLE CATALOG (FIREMAN) FOR ORACLE

1. RELEASE DESCRIPTION

This release contains the gLite Data Management Single Catalog (Fireman) for Oracle module v. 2.0.2. The following sections provide additional information about the release content, the module dependencies, the known bugs and issues and a list of bugs closed since the previous release. For information about installing and using the gLite Data Management Single Catalog for Oracle, please refer to the gLite Installation and User Guides.

2. CHANGES IN THIS RELEASE

2.1. CHANGES IN FUNCTIONALITY

This release doesn't contain any functional change, but the database schema has changed. If the service must be upgraded from gLite 1.3 to 1.4, the database must be completely removed with

```
glite-data-single-catalog-oracle-config.py --remove
```

and then a standard installation with

```
glite-data-single-catalog-oracle-config.py --configure
```

must be done.

2.2. CHANGES IN CONFIGURATION

The following new parameters have been added to the glite-data-single-catalog-oracle.cfg.xml file:

Parameter name	Default value	Description
catalog-service-fr.ADMIN_VOMS_ATTRIBUTES	<empty>	ADMIN/superuser settings. Note that the extra privileges defined by the settings below are combined in an OR fashion - a VOMS match OR a mapfile match will result in the client being given the extra authorisation. If both of these are empty there is no superuser defined for the service and certain functionality is unavailable (i.e. if permissions on global default permissions are not tweaked, nobody can change them or create directories in the ROOT path. If a user's certificate contains this VOMS attribute, they are additionally permitted to do any operation upon the service including metadata bits operations. If a user's certificate contains any of these VOMS attributes, they are additionally permitted to do any operation upon the service including creating channel and VO managers. Default: <empty>

catalog-service-fr.ADMIN_MAPFILE	<empty>	If a client's certificate subject name is listed in this file, they are additionally permitted to do any operation upon the service including manage channels. Default: <empty>
----------------------------------	---------	---

The following parameters have been changed in the glite-data-single-catalog-oracle.cfg.xml file:

5. KNOWN BUGS AND ISSUES

This release has the following known bugs and issues. Bug numbers refer to the gLite Bug Tracking system database hosted on the CERN Savannah system at <https://savannah.cern.ch/bugs/?group=jra1mdw>.

- Oracle FireMan timeouts with large number of clients. The issue is being investigated. So far it could be only randomly reproduced. It may be related to a race-condition in axis
- glite-catalog-ls fails, the installation script doesn't seem to report any problems and nevertheless the '\ls' instruction does not work. This is due to the need of setting correctly the codepage on Oracle. This is a pre-requisite, there's known issue with db pool library Tomcat uses and oracle jdbc drivers, the supported codepage of the database must be unicode based, i.e. WE8ISO8859P1.
- The SEIndex service fails with an InternalException error. This means that data location cannot be done against an Oracle Fireman catalog (for example when submitting jobs with data input requirements)
- No removal procedure is provided with this release apart from the removal of the RPMS. Any account, group or other resource created during the module configuration must be manually cleaned.
